Introduction

This publication is a summary of Vital Statistics of the Province of Alberta for 1978, as of October 31, 1979.

Only events which took place in Alberta are included. However, Statistics Canada figures are adjusted to exclude events to non-Alberta residents, and include events to Alberta residents in other provinces.

This year's publication has been modified by deleting specific age/sex tables for certain causes of death, although the information is still available on special request.

New information this year includes 1978 birth, marriage and death rates for Alberta municipalities of population 1,000 or greater.

Once again we have included Comparative Vital Statistics for Selected Regions and Countries (1977) as compiled by Mr. D. Nagnur, Demographer, Vital Statistics and Disease Registries Section, Statistics Canada.

Tables were generated from the Vital Statistics computer system. I wish to thank Research and Planning for their assistance in compiling this review.

1 Birthrate is very low in Lloydminster because the hospital is located on the Saskatchewan side of the border. Therefore, births to Alberta residents in hospital are not recorded as Alberta events, but will be included in the Statistics Canada figures when out-of-province events are added. This may also affect the death rates as deaths occurring in the hospital would be recorded in the same manner.

COMPARATIVE VITAL STATISTICS FOR SELECTED REGIONS AND COUNTRIES FOR 1977

Comparative Vital Statistics for Selected Regions and Countries

Though the 1977 annual vital statistics reports have not been published as yet, the main indicators are now available and some of these have already been reported in the Statistics Canada Daily. The attached tables present the comparative rates and ratios for the selected countries for the latest available year with those for Canada for the year 1977. Following the suggestions of several users, comparative tables on infant and childhood mortality have been specially added this year. With the significant reductions in infant mortality in recent years in Canada, these tables might be found particularly interesting. Any comments or suggestions regarding additions or improvements to this set of tables would be appreciated; attempts would be made to incorporate these in the next year's version of these tables. The counts and rates for countries other than those for Canada have been compiled from the United Nations Demographic Yearbook for 1977.

GLOSSARY OF TERMS

Vital Statistics: Records dealing with births, deaths, marriages and adoptions: all events which have to do with an individual's entrance into or departure from life, together with changes in civil status.

Live Birth: A complete expulsion or extraction from the mother, irrespective of the duration of the pregnancy, of a foetus in which, after expulsion or extraction, there is breathing, beating of the heart, pulsation of the umbilical cord or definite movement of a voluntary muscle, whether or not the umbilical cord has been cut or the placenta is attached.

Stillbirth: Foetal death of at least 20 weeks gestation or 500 grams weight.

Gestation: Time between the conception and birth of an infant, the usual length being 40 weeks.

Wedlock: For purpose of this report, in-wedlock means that the parents of the child are married to each other at the time of the birth, or are subsequently married and have changed the birth registration.

Birth Order: Number of live births to the mother, including this birth.

Infant Death: Death of a child between birth and one year of age.

Neo-natal Death: Death of an infant 28 days of age or less.

Natural Increase: Excess of births minus deaths.
